ABSTRACT OF THE PROJECT

This project focuses on analysing Blinkit grocery sales data using Power BI and ChatGPT to generate meaningful business insights. In modern retail businesses, understanding customer behaviour, product demand, and outlet performance is essential for improving operational efficiency and decision-making.

The dataset used in this project includes details such as item types, fat content, outlet size, outlet location, sales values, and customer ratings. Data cleaning and preprocessing were performed using Power Query to remove inconsistencies and ensure data accuracy. Using Power BI, interactive dashboards and visualisations were created to analyse key metrics such as total sales, average sales, number of items, and average rating. ChatGPT was used to generate insights and summaries from the analysed data.

The final output of the project is an interactive dashboard that helps businesses identify high-performing products, analyse sales trends, and improve decision-making processes.

ACKNOWLEDGEMENT

We would like to express our sincere gratitude to everyone who supported us during the completion of this project.
Firstly, we would like to thank our project guide, **Umamaheswari** for their continuous guidance, encouragement, and valuable suggestions throughout the project. Their mentorship helped us gain deeper insights into data analytics and business intelligence.
We also extend our sincere thanks to **Edunet Foundation, Microsoft, LinkedIn, and SAP** for providing this wonderful fellowship opportunity and enabling us to learn modern AI-assisted tools and technologies.
We are grateful to our **institution (Graphic Era Deemed to be University)** for providing the necessary academic environment and support required to complete this project.
Finally, we would like to thank our family and friends for their constant encouragement and motivation throughout this journey.

LIST OF TABLES

TABLE 1 - Raw Dataset Summary

Field Name	Data Type	Description
Item Identifier	Text	Unique ID of each product
Item Type	Text	Category of product (Fruits, Snacks, Dairy, etc.)
Item Fat Content	Text	Type of product (Low Fat / Regular)
Outlet Identifier	Text	Unique ID of outlet
Outlet Size	Text	Size of outlet (Small, Medium, High)
Outlet Location	Text	Location type (Tier 1, Tier 2, Tier 3)
Outlet Type	Text	Type of outlet (Supermarket, Grocery Store)
Outlet Establishment Year	Numeric	Year when the outlet was established
Item Visibility	Numeric	Visibility of the product in the store
Item Weight	Numeric	Weight of the product
Sales	Numeric	Total sales/revenue generated
Rating	Numeric	Customer rating of the product

Table 2- Cleaned Dataset Summary

Issue Found	Description	Cleaning Method Applied
Duplicate Records	Some rows had identical product and order information	Removed duplicate entries
Missing Values	The SKU and the returned column had missing values	Filled with default values or removed
Data Type Errors	Numeric fields stored as text	Converted to numeric format
Formatting Issues	Extra spaces in some numeric columns	Trimmed and standardised values
Null Values	Some delivery days were missing	Replaced with the average delivery time

Table 3 - Hardware Requirements

Component	Specification
Processor	Intel Core i3 / i5 / i7
RAM	Minimum 4 GB (8 GB recommended)
Storage	Minimum 50 GB free space
Display	1366 × 768 resolution or higher
Internet	Required for AI tools and dashboard sharing

Table 4 - Software Requirements

Software	Purpose
Windows 10 / 11	Operating system
Microsoft Excel	Data cleaning and analysis
Power BI Desktop	Dashboard and visualization
ChatGPT / Gemini	Insight generation and report writing
Google Chrome / Edge	Web access for tools

Table 5 - Key Findings / Results Summary

Finding	Description
High Sales Categories	Certain item types, such as fruits, snacks, and household products, generated the highest sales
Outlet Performance	Medium-sized outlets and Tier 3 locations contributed the most to overall revenue
Sales Trend Analysis	Sales showed variation based on outlet establishment year, with some years performing better
Customer Preference	Low-fat and Regular products showed different demand patterns across categories
Product Performance	Some products consistently performed better in terms of sales and ratings
Dashboard Insights	Visualizations helped identify trends, top-performing outlets, and areas for improvement

CHAPTER 1

Introduction

The rapid growth of online grocery platforms like Blinkit has increased the importance of data analytics in business operations. These platforms generate large volumes of data, making it difficult to manually analyse and extract useful insights.

This project focuses on analysing Blinkit grocery sales data using Power BI. The goal is to convert raw data into meaningful insights that can help improve business performance, customer satisfaction, and sales strategies.

Problem Statement

Retail businesses like Blinkit face challenges in analysing large and complex sales data. The data often contains inconsistencies and lacks proper structure, making it difficult to identify trends and patterns.

Without proper analysis, businesses may face issues such as poor sales strategies, a lack of customer insights, and inefficient planning.

This project aims to solve these challenges by using Power BI for data visualisation and ChatGPT for insight generation.

1.1 Motivation

The project is motivated by the need to understand how data analytics tools can improve business performance in retail.

By analysing sales data, businesses can identify trends, understand customer preferences, and optimise their strategies. The use of ChatGPT further helps in generating quick insights and improving efficiency.

1.2 Objectives

The main objectives of this project are:

To understand the Blinkit dataset structure

To clean and preprocess the dataset

To analyse sales trends and product performance

To create KPIs using DAX

To build interactive dashboards using Power BI

To generate insights using ChatGPT

1.4 Scope of the Project

Includes:

- Sales data analysis
- Dashboard creation
- Insight generation

Excludes:

- Real-time data integration
- Machine learning models

CHAPTER 2

Literature Survey

Business Intelligence tools like Power BI are widely used for analyzing business data and creating dashboards.

Studies show that data analytics helps improve decision-making, reduce operational inefficiencies, and increase business performance.

However, many businesses still rely on manual methods, which are time-consuming and less effective. This project demonstrates how Power BI and ChatGPT can be used together for better analysis.

2.1 Existing Work and Research

Several studies have explored the use of data analytics in retail and sales management. Business intelligence tools help organisations analyse sales performance, understand customer preferences, and monitor business operations effectively.

These tools allow businesses to visualise data, identify trends, and improve decision-making. However, many small businesses still rely on manual methods or basic tools, which limit their ability to generate accurate and actionable insights.

This project focuses on using Power BI and ChatGPT to overcome these limitations and provide better analysis.

2.2 Tools and Technologies Review

Microsoft Excel

Used for basic data handling and initial data preparation. It helps in organising datasets before importing into Power BI.

Microsoft Power BI

A powerful business intelligence tool used for creating interactive dashboards and visualisations. It helps in analysing sales trends, product performance, and outlet efficiency.

AI Chatbot (ChatGPT)

ChatGPT is used to generate insights, summaries, and explanations from the analysed data. It helps in faster understanding and improves the overall analysis process.

- ## 2.3 Gaps Identified

Some limitations identified in existing approaches include:

Limited use of AI tools like ChatGPT in student-level analytics projects.
Many small businesses still rely on manual methods or basic tools, which are not scalable.
Lack of proper integration between data visualisation tools and AI-based insight generation.

This project aims to overcome these gaps by combining **Power BI for data visualisation** and **ChatGPT for insight generation**, creating a more efficient and user-friendly solution.

CHAPTER 3

Proposed Methodology

The proposed methodology involves collecting inventory and order data, cleaning the dataset, analysing patterns, and generating visual insights.

3.1 System Design

Data Input – Import Blinkit dataset

Data Cleaning – Handle inconsistencies

Data Analysis – Create KPIs using DAX

Visualisation – Build dashboard

AI Integration – Generate insights using ChatGPT

3.2 Modules / Components Used

Data Collection Module

Data Cleaning Module

Data Analysis Module

Visualization Module

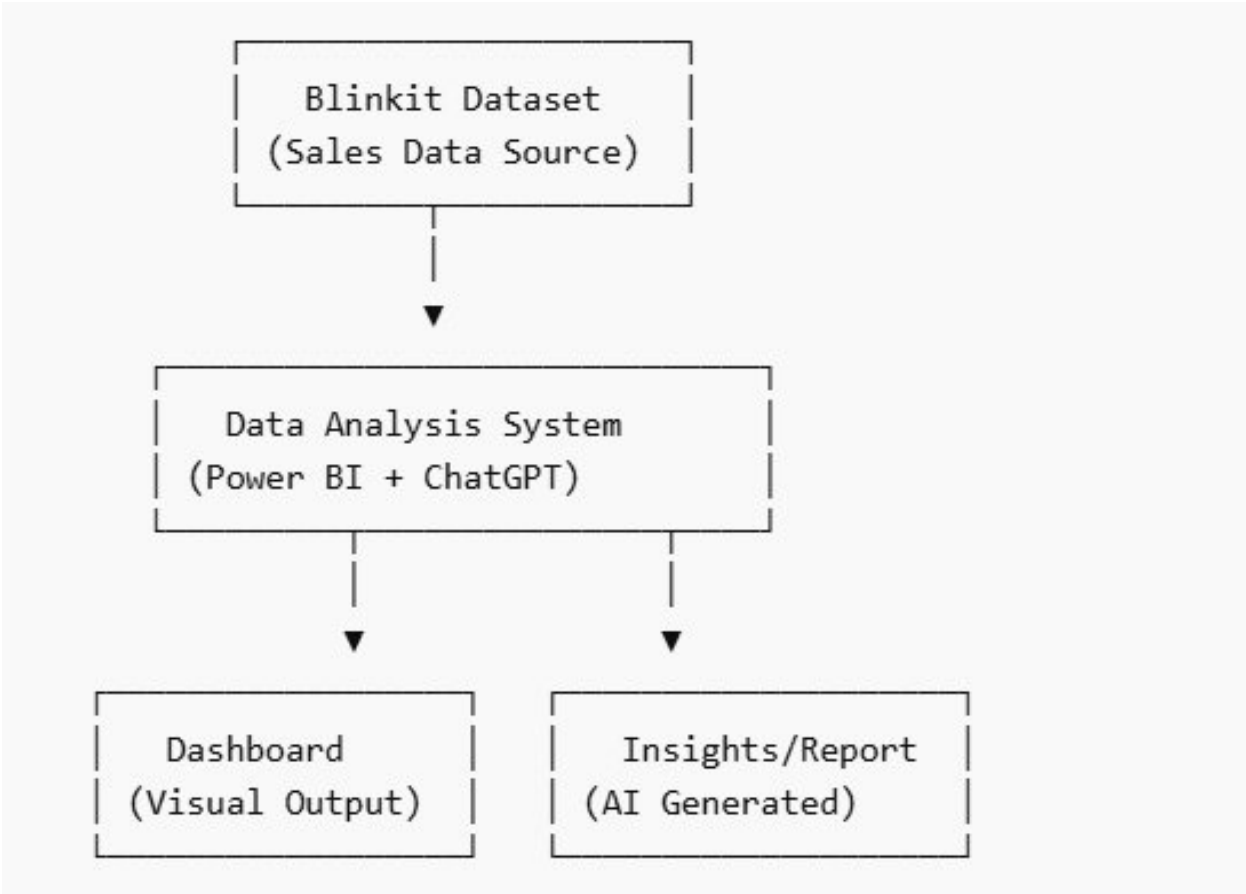
AI Insight Generation Module

3.3 Data Flow Diagram (DFD)

A Data Flow Diagram (DFD) is a graphical representation of how data flows through your system. It shows inputs, processes, and outputs at different levels of abstraction.

Level 0

Raw Data → Power BI → Dashboard → Insights



DFD Level 1 — Detailed Process Flow

Level 1:
Data Loading → Cleaning → Analysis → Visualization → AI Insights

3.4 Advantages

Faster data analysis

Better visualization

Improved decision-making

Easy to use and interactive

3.5 Requirement Specification

Hardware Requirements

Component	Specification
Processor	Intel Core i3 or higher (i5/i7 recommended)
RAM	Minimum 4 GB (8 GB recommended)
Storage	Minimum 50 GB free disk space
Display	1366 x 768 resolution or higher
Internet	Required for Copilot / Chatbot access

Software Requirements

Software	Details
Operating System	Windows 10 / 11 or macOS
Microsoft Excel	Microsoft 365 (Excel with Copilot) / Excel 2019+
Power BI Desktop	Latest version (free download from Microsoft)
Microsoft Copilot	Integrated via a Microsoft 365 subscription
AI Chatbot	ChatGPT / Google Gemini / Microsoft Copilot (web)
Web Browser	Google Chrome / Microsoft Edge (latest version)

CHAPTER 4

Implementation and Results

Data Cleaning Results

Issues:

- Inconsistent values
- Missing data

Solutions:

- Standardization
- Value correction

- Result:
  Clean dataset ready for analysis

Structured Data

4.2 Visualisation / Output Results

Dashboards created:

- Sales Analysis Dashboard
- Outlet Performance Dashboard
- Product Analysis

Charts include:

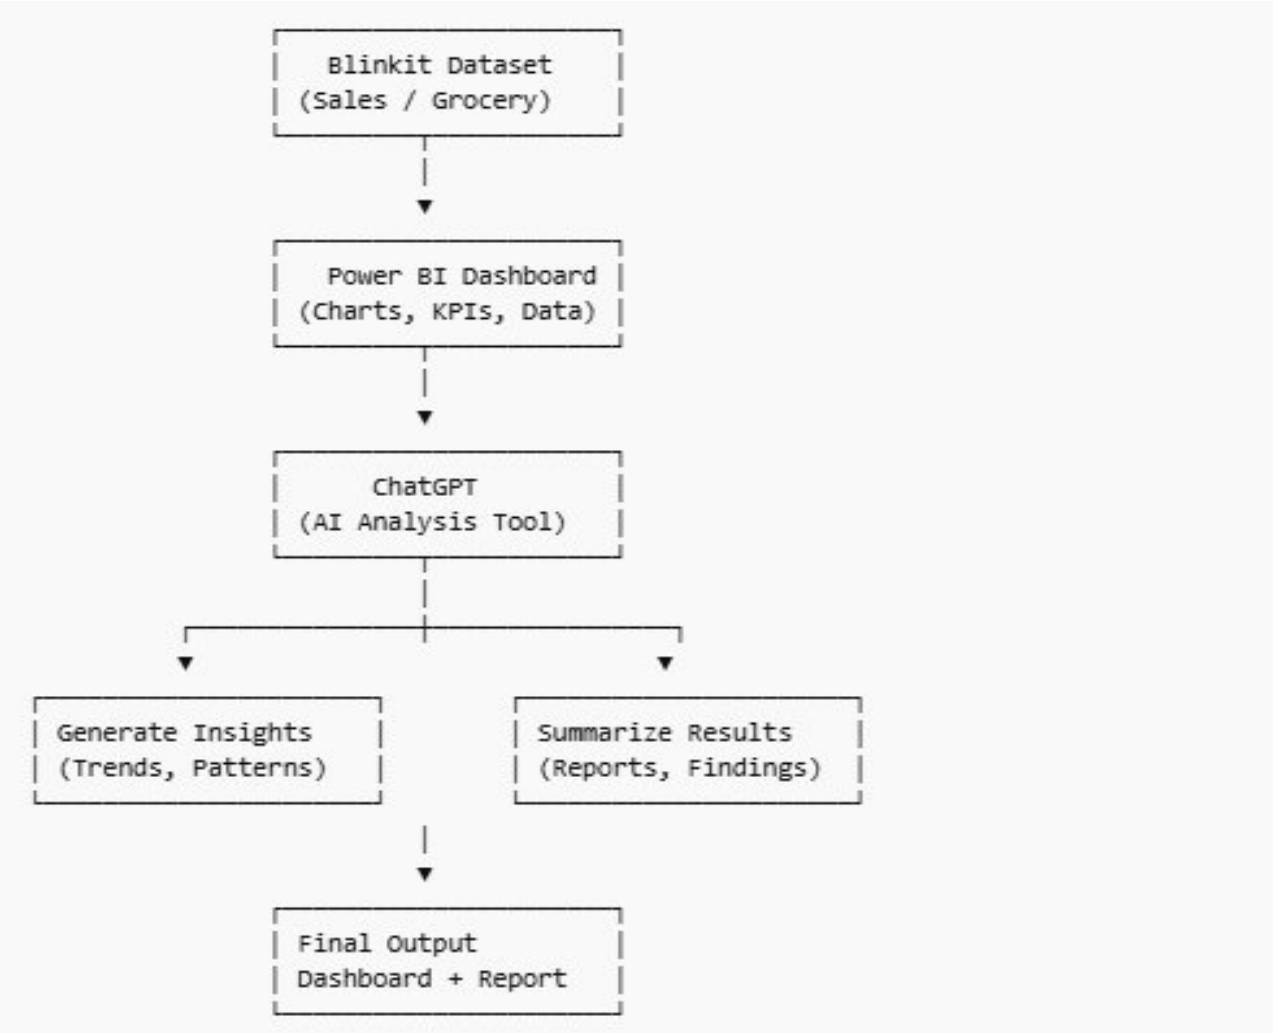
- Sales by Item Type
- Sales by Outlet Size
- Sales by Location
- KPI Cards

4.3 AI Tool Integration Results

Tool Used: ChatGPT

Use:

- Insight generation
- Summary creation
- Analysis explanation



CHAPTER 5

Discussion and Conclusion

5.1 Key Findings

- Some products generate higher sales
- Outlet size and location impact revenue
- Sales trends vary across categories

5.2 Project Links

https://drive.google.com/file/d/1KwbeOf2Kby4XhdJe10FmzNI-MKW80Rbs/view?usp=sharing

5.3 Limitations

Limited dataset

No real-time data

AI depends on input quality

5.4 Future Work

Future improvements may include:

Real-time data integration

Machine learning models

Advanced analytics

5.5 Conclusion

This project focused on analysing Blinkit grocery sales data using Power BI and ChatGPT to generate meaningful insights. The raw dataset was first cleaned and transformed using Power Query to remove inconsistencies, missing values, and formatting issues. After that, key performance indicators such as total sales, average sales, number of items, and average ratings were created using DAX.

Interactive dashboards were developed in Power BI to visualise sales trends, product performance, and outlet analysis. These visualisations made it easier to understand which

products are performing well, how outlet size and location affect sales, and where improvements are needed.

ChatGPT was used to generate insights, summaries, and explanations from the analysed data, which helped in faster understanding and better reporting.

All the objectives of the project were successfully achieved, including data cleaning, analysis, dashboard creation, and insight generation. The project clearly demonstrates how raw data can be converted into useful business insights using data analytics tools.

Overall, this project adds value by helping businesses make better decisions, improve sales strategies, and understand customer behaviour. It also shows how Power BI and AI tools like ChatGPT can be effectively used together in real-world retail scenarios for improved efficiency and performance.

Appendix B — Key Excel Formulas Used

The following formulas and analytical functions were used during the project for data cleaning and analysis.

Formula / Function	Purpose
SUM(Sales)	Used to calculate total sales
AVERAGE(Sales)	Used to calculate average sales
COUNTROWS(Table)	Used to calculate the number of items
AVERAGE(Rating)	Used to calculate the average customer rating
CALCULATE()	Used for dynamic KPI calculations
FILTER()	Used to filter data based on conditions
Power Query	Used for data cleaning and transformation
Visualization Tools	Used to create charts and dashboards

Appendix C — AI Prompts Used

Prompt 1

Analyse this Blinkit sales dataset and identify high-performing products and categories.

Prompt 2

Generate insights from this dataset to identify sales trends by outlet size and location.

Prompt 3

Summarise the key findings from the Blinkit sales analysis dashboard.

Prompt 4

Suggest improvements for sales performance and business strategy based on this dataset.

Appendix D — Screenshot Gallery
